METHODOLOGICAL EXPLANATIONS

Indices on Retail trade and Sale and Repair of Motor vehicles from first quarter 2008 will be calculated with base year 2005=100. Weights are calculated base

on Retail trade and Sale and Repair of Motor Vehicles survey in 2005, realized from INSTAT.

The turnover is estimated in products level. The codification used is CPA (Classification of Products by Activity). The main groups are in accord with main groups used in Consumer Price Index.

Based on the main activity in the survey there are included

- Retail trade activity, group 52-NACE-Rev 1 (exclude the 52.6 and 52.7)
- Sale and repair of motor vehicles, group 50 NACE Rev 1.

Sample the enterprises with 1 - 4 employed are surveyed by sample survey.

The enterprises with 5 and more employed are surveyed exhaustively.

Data collection the data are collected directly from enterprises. The interviewers collect the data from enterprises. The questionnaire is filled from the interview.

Definitions

Indices show the changes on one period to the other of one or more variables.

Turnover is the total amount realized by enterprises during the month from selling of goods, selling of own products and services excluded VAT.

Number of persons working includes all persons who actually work in the observed unit. There are included salaries, owners and co-owners and family members, in the end of the quarter.

Indices

Volume Index is obtained by eliminating the change of price by deflating the value index with retail prices index

Employment index is calculated by, dividing the number of persons employed in reference period with the number of persons employed in base period.
