

## RDB BUSINESS TREND PERSPECTIVES Q2

(September 2009)

As part of structural and methodological adjustment to the concept of reporting the European Commission developed for the purpose of monitoring and comparing various business cycles of the member states and EU member candidates, since October 2004 the Republic Development Bureau has been conducting monthly surveys of economic entities in **manufacturing industry** on the basis of which business climate is analyzed and short-term forecasts of industrial development are produced.

With the view of comparatively analyzing developments of business cycles in Serbia and EU countries as well as producing short-term forecasts of industrial development, in this publication **the European Commission methodology for calculating the *Business Climate Indicator BCI* and *Industrial Confidence Indicator ICI*** has been applied.
