**Source: Saudi Stock Exchange's Website, Reuters & KAMCO Research.**

Notes: NM: Not Meaningful. NA: Not Applicable. Trailing P/E is calculated on the earnings for TTM 9M-11 and current prices. Trailing P/B is based on 30-Sept-2011 equity and current prices. Current Yield for individual stocks is based on the year end 2010 DPS & current prices. Valuation multiples for companies that have not yet disclosed their financials for 9M-11 are still based on the earnings for TTM 1H-11 and equity as of 31-June-11. DTD: daily change. MTD: Beginning of Current Month to Date, YTD: Beginning of Year to Date. SAR: Saudi Riyal. \* Companies that vary in their fiscal years are treated separately to adjust for recent results announcements. DTD % change for individual stocks is based on the change in last traded price as being provided by Saudi Stock Exchange. DTD % change in sectors and total market is based on the daily change in market capitalization (market capitalization is calculated based on the last traded price) which might not conform with the benchmark return. DTD change in market cap might not match that of the TASI as the index calculation is based on floating shares in the market. \*\*YTD Turnover is calculated based on free floating capital and updated on monthly basis.

**Beta** is the tendency of a security's returns to respond to swings in the market. A beta of 1 indicates that the security's price will move with the market. A beta of < 1 means that the security will be less volatile than the market. A beta of > 1 indicates that the security's price will be more volatile than the market. For example, if a stock's beta is 1.1, it's theoretically 10% more volatile than the market. Beta is calculated based on the daily share price returns versus TASI for the companies which have a minimum trading history of 1 year.
